

Network Configuration Utility for Industrial Ethernet

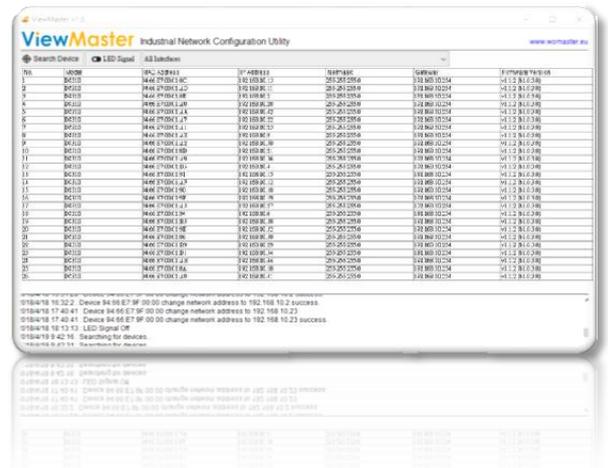

ViewMaster

Industrial Network Configuration Utility

ViewMaster network configuration utility is designed for discovery, configuration and status monitoring of your WoMaster networking wired and wireless devices in your network.

ViewMaster scans network for configurable wired or wireless devices and provides management features such as batch IP setup, backup / restore and reboot. Firmware upgrade can also run 50 devices per batch.

Friendly design allows you to manage WoMaster devices in an easy and group-wise way especially for large scale network installation without knowing each device IP address.

Features & Benefits

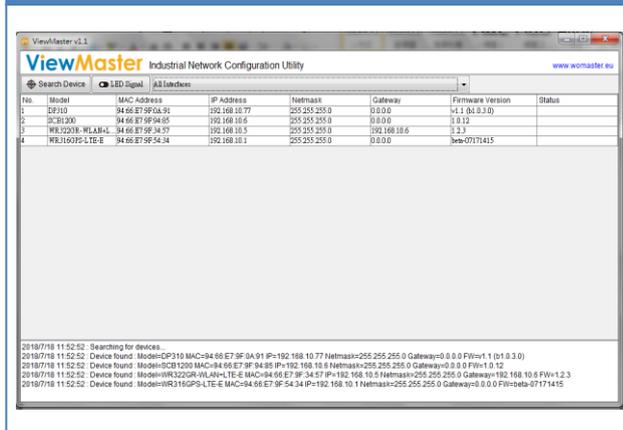

Network Auto Discovery and Monitor

- Automatically discover network devices for Ethernet switches and wireless devices
- Device list view for the current configuration outlook of all devices
- Handy device LED signal indicator for location identification
- Free download for up to 2000 network nodes configuration
